"All data entered is locked in or stored to an external device. Once you close or copy a file, it is locked and will not be accessible again until the computer is rebooted." Autodesk, Inc. There is a very large difference between The idea of being able to enter, move and manipulate drawings and data on a computer screen is more than just a convenience. The ability to quickly and easily change a drawing (or parts of a drawing) is crucial in every aspect of design and manufacturing. Through the use of a computer, it is possible to change a drawing with relative ease, as long as there is a way to store the data so that it can be reloaded when needed. Autodesk uses a special feature called "Lock" to ensure that the drawing data cannot be altered or deleted. The data is stored in an external, physical device, the "Lock Device", which works like an archive. Thus, you can use the drawing in the same manner as if you used it the first time. The drawings can be opened in AutoCAD, reviewed, modified, printed and closed without the need to first save the data to the computer memory. All data entered is locked in or stored to an external device. Once you close or copy a file, it is locked and will not be accessible again until the computer is rebooted. You are responsible for backing up the Lock Device, and using it whenever you edit a drawing. Autodesk, Inc. What are the advantages of using Lock Device? Editing a drawing has never been more convenient. The first time you open a drawing you have to save it to the Lock Device. This can take time, depending on the size of the drawing. If you need to make changes to a large, previously saved drawing, the new drawing will not open until the Lock Device is accessed. The whole process from opening a drawing, making changes, saving the data and closing it, is completely automated, which helps prevent human error. It is never too late to save the Lock Device data, although for large drawings, it will take more time than when opening the drawing the first time. It is not possible to save an incomplete drawing to the Lock Device. You can make changes to the same drawing (parts of the same drawing) without having to save and close a new file each time. When you close
