With several billion dollars in annual revenue, AutoCAD has become the most popular CAD application in the world. According to Autodesk, AutoCAD is used by over 33 million users worldwide. AutoCAD is a registered trademark of Autodesk, Inc. in the USA and other countries. History AutoCAD was originally released by The Parametric Technology Corporation (PTC) in 1982 as a commercial desktop CAD program for the desktop personal computer. PTC, a company co-founded by Dennis Jenkins and Anthony Pratt in 1978, had been working with Balsamiq since the early 1980s on the development of interactive graphics software for use on personal computers. In June 1981, these two employees, Jenkins and Pratt, decided to build a personal CAD application for the desktop that could be run on a microcomputer with an internal graphics controller. A year after releasing Autocad, PTC was acquired by Apple Computer, Inc. in 1987. Apple purchased PTC, mainly to acquire the user base for its nascent Macintosh computer platform. When Apple introduced the first version of the Mac OS, Version 8 in 1984, Autocad (originally named 'AutoCAD') was bundled as part of the Macintosh System Software bundle. In 1992, Apple introduced a new family of Mac OS operating systems, the Classic Mac OS, which included an enhanced version of AutoCAD. The application was named Mac-AutoCAD. Shortly after Apple released the first version of Mac OS 9, AutoCAD became available as a stand-alone application. It was named AutoCAD 2000, but the version number never changed from 2.0. The first Mac OS version to contain AutoCAD as an application-only package was Mac OS X 10.3 ("Panther"), released in early 2004. Mac-AutoCAD offered several advantages over the commercial versions of AutoCAD for Mac OS. One of the most significant was that it was only available as an "application only" package—not as a full-featured desktop app. Autodesk also made AutoCAD available as a download for a small fee, for users with a valid Autodesk software license. In January 2005, Autodesk launched its first desktop app for Apple's iPhone OS (iPhone version 1.0). Later that year, the iPhone version was launched for Android-based mobile devices. Another advantage of the

This will work as long as you have not changed your AutoCAD settings. Q: Find adjacent points to a point in time series data I have a time series of binary values with some values missing. I need to find where the binary value is high and the next low. I've seen solutions where you need to have more than two datapoints, or else you don't have a high-low pair. For example: -1 -1 -1 1 0 1 0 0 0 ... What I'm looking for is a method that could work for any number of binary values in any order. The order is arbitrary, but the dates are ordered. A: The solution for this problem is a binary search. Let's say you are looking for the lowest value greater than x, and you have n values in your vector. Binary search will look for the index of your vector where your value (vector[i] in this case) is less than or equal to x. Then, if you know that the smallest element that was found is equal to vector[j], binary search will look for the index of your vector where your value (vector[j] in this case) is greater than or equal to x. When the second iteration has a lower bound for the smallest element than the first iteration, you know that you have found the lowest value greater than x.
