The new AutoCAD desktop app, still available for purchase, runs on Windows, macOS and Linux operating systems, supports vector and raster drawing, vector editing, dimension, blocks and text. Early CAD applications The evolution of CAD applications can be traced to Herman Hollerith's invention of the tabulating machine in 1892. His invention, known as the Hollerith System, could quickly add, edit, sort and display data without any human intervention. However, the process was slow, and the technology couldn't handle the large volumes of data that were needed to produce engineering drawings. In the 1930s, Edward Charles Howard presented a computer program for drafting that would write the resulting drawing directly onto paper. Such a system proved to be too slow to handle the data needed to create realistic drawings for industrial purposes. Howard's work led to the creation of a new type of computer program: the CAD (Computer-Aided Design) application. CAD is a collection of computer programs that can be used to create 2D drawings, using geometric shapes and symbols that are drawn on the screen or printed on paper. CAD applications began to appear in the 1970s, and by the 1980s, most engineering firms used at least some of the available CAD applications. Figure 1. In 1980, Autodesk introduced its first desktop CAD product, AutoCAD I, on a DEC PDP-11/45 minicomputer. It sold for \$13,500. In 1981, the company released AutoCAD II on a PDP-11/60 minicomputer. Turns out they were not only rigging the game, but they were also rigging the news. We have to know who our government really works for: the American people or the nine. As more is learned about the way that the Supreme Court was rigged to give the Democrats a 5-4 majority in the recent Citizens United decision, we are learning more about the way that the "news" was rigged to favor the Democrats. And, the most shocking part of all is that the mainstream media may have even been involved in the criminal act. The illegal act By now most of us are familiar with the criminal acts that occurred during the Bush years. That time in history, when we should have been worried about terrorism, was squandered by the DOJ, the CIA, the FBI and their political allies in the media. The Obama administration is now engaged in "law enforcement" on an industrial scale, in an effort to determine whether anyone in the Bush administration may have been involved in the rigging of the last election. At a press conference on July 27, 2016, Director of the FBI James Comey told the world that the FBI is investigating the question of whether there were any illegal actions taken by anyone in the last administration to improperly affect the outcome of the election. "[B]ecause there's no doubt that a very sophisticated effort was made to try to make sure that Hillary Clinton was the next president of the United States and Donald Trump was not," Comey said. "And I think it's important for people to understand that, that effort was a sophisticated one. It involved the whole government in some way, and that includes the media." Indeed, a report released by the Wall
