Q: What is the difference between a static method and a static property? I'm having a hard time understanding when to use a static method and when to use a static property. For example: `public static string Message { get { return "Hello World"; } }` Or `public static string Message = "Hello World";` What is the difference between them, and when should I use each? A: A static method is basically a "normal" method without a this instance. So you should not really call it by a variable, rather by the class name. The way to call it is: `Message.Get()` Since you can only call it with the class name. The other part is that you should not use the class name for the return value. You can read the explanation here: [Properties vs Methods](#) So you should use a static property instead of a normal variable: `public static string Message { get { return "Hello World"; } }` You can use the property like this: `Message` For readability reasons it should be a property, but not a field. What's New in the Morse Code Master?

This software utilises a set of unique features to improve your morse code skills. The software allows you to create and develop new sequences using any character in a standard morse code set (i.e. used by the National Weather Service and the US Coast Guard) This is of real benefit for those who wish to extend their ability from character triplets to full morse code communication. You can easily see that in the sequence of morse code in the example below, an attempt is made to put both the "Turn Left" and "Turn Right" messages in sequence: Morse Code Master provides a wealth of features and it is the only commercially available software which offers a dedicated facility for developing your morse code skill. The software also offers a complete list of reference morse code data for you to study before you begin using the software. This software can be used by non-commercial (i.e. recreational users) as well as commercial operators (i.e. people wishing to obtain Commercial Operator Licences). Morse Code Master is licensed for use by those who hold a Commercial Operator Licence as well as people who are not Commercial Licence holders. A user who has licensed the software needs to indicate this to Morse Code Master and this registration process is fast and easy. These key features are described in further detail below: + Unique set of features to enhance morse code development (not found in other morse code programs). + Unique ability to create and develop your own sequences and morse code. + Unique ability to input sequences in whatever order you wish (including sequences which are not in any particular order). + Ability to include morse code in your own message + Ability to view and compare your morse code message against a "World Record" message held by other users. + Ability to view and compare the morse code message against a set of standard messages held by the National Weather Service and US Coast Guard. + Ability to directly reference a complete listing of morse code data, where each morse code character is located in the standard morse code set. In order to help users create morse code sequences, Morse Code Master includes a set of sample sequences. These sequences can be saved and recalled later, or edited, for example to identify when a character is missing or moved. Sequences created can be recalled from any keyboard location and, additionally, sequences can be inserted into a message before the last morse code character. In addition, users can apply the feature of a "Record" function which allows a user to compare sequences from any keyboard location against a fixed set of sequences stored in Morse Code Master. All of this makes Morse Code Master a powerful and unique application in the field of morse code training and development. Morse Code Master is easy to use and learn. The user does not need any prior morse code experience and can learn how to use
