combobox, in combo2, of the form I
have 2 comboboxes (A and B).
There is a function: If combobox A

item selected: combobox B Item

you do that twice, you have to go
back through combobox a to find it
again. That's the reason why, I want
to store the combobox A selection in
a variable, and then place it in
combobox B. How do I do that? I
tried this: Public Class Form1
